1. Given a string containing only digits, return all possible valid IP addresses that can be formed using recursion.

Test Case 1:
Input: "25525511135"
Output: ["255.255.11.135", "255.255.111.35"]

Test Case 2:
Input: "101023"
Output: ["1.0.10.23", "1.0.102.3", "10.1.0.23", "10.10.2.3", "101.0.2.3"]

2. Given a matrix, return the count of elements that are strictly greater than all elements in their row and strictly smaller than all elements in their column.

Test Case 1:
Input:
[[3, 7, 8], [9, 11, 13], [15, 16, 17]]
Output: 1

Test Case 2:
Input:
[[1, 2], [3, 4]]
Output: 0

3. Given an integer N, generate the smallest number greater than N using only digits 3 and 7.

Test Case 1:
Input: 10
Output: 33

Test Case 2:
Input: 40
Output: 73

4. Given an integer N, find the count of trailing zeros in N! (factorial of N).

Test Case 1:
Input: 10
Output: 2

Test Case 2:
Input: 100
Output: 24

5. Given two integers A and B, compute
(^B)%M

Test Case 1:
Input: A = 2, B = 10, M = 1000
Output: 24

Test Case 2:
Input: A = 7, B = 256, M = 13
Output: 9
